

## Earth Day Celebrations

Earth Day was a great success from the perspective of 'doing something positive for the planet'. The day started with the whole school gathering for a short presentation on how our rubbish is affecting the world. This motivated both learners and staff to take action for the benefit of humanity and the environment. College learners spent 2 hours picking up litter in town and this was brought back to school to separate and use suitable waste for packing eco bricks. Plastic, food packaging, tinfoil, polystyrene and cling film are examples of rubbish that can be used to fill eco bricks. Our intention is to use these eco bricks to build benches around the school (amongst other things). So please do your bit and help us reduce landfill waste by using an eco-brick instead of a dustbin.

The Grade 8 class was allocated the PnP shopping centre to collect litter on Earth Day. They collected four full bags of litter. Well done!!!!

After collecting litter in town the Grade 8 class filled 2 litre bottles with plastic items from litter collected.

## Shopping !

The learners all brought clothes to school that they did not want and exchanged the clothes for items they liked.
